TECHNICAL SKILLS

Languages: JavaScript, Python, SQL

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS

Backend & Database: Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication

Tools: Git, GitHub, Vite, Postman, Cloudinary, Stripe

Concepts: API Integration, Real-Time Systems, State Management, Authentication, CRUD Operations

EDUCATION

B.Sc. in Computer Science

2021 – 2025

BRAC University

Bangladesh

Higher Secondary Certificate (HSC)

2020

BCIC College

Bangladesh

Secondary School Certificate (SSC)

2018

Noakhali Zilla School

Bangladesh

PROJECTS

ShopHub — *Next.js, MongoDB, React, Stripe, Tailwind CSS* — GitHub

- Developed a production-ready e-commerce application using Next.js, React, MongoDB, and TailwindCSS with JWT authentication, shopping cart, wishlist, and order management. Built a secure Admin CMS dashboard with product CRUD, user management, order tracking, and Cloudinary image uploads using RESTful APIs and Mongoose.

Savour & Stone — *React, Node.js, Express.js, MongoDB, Mongoose* — GitHub

- Built a responsive restaurant reservation platform with React, Node.js, and MongoDB. Implemented a custom dark themed UI with CSS Grid, interactive menu modals, and smooth scroll navigation. Features real time form validation and RESTful API integration for booking management.

Movie Mania — *React, Vite, TMDB API* — GitHub

- Built a sleek, responsive React web app to browse, search, and favorite movies using the TMDB API. Implemented live search, genre filtering, trending and top rated views, carousel slider, and favorites persistence using localStorage. Integrated environment-based API key management and optimized fetch logic for performance.

QuickChat — *React, Tailwind CSS, ZEGOCLOUD ZIM, Vite* — GitHub

- Developed a real-time retro-themed chat application using React and ZEGOCLOUD ZIM SDK. Implemented live one on one messaging, emoji reactions, sound notifications, and auto-scrolling chat sync. Designed a nostalgic pixel-style UI using Tailwind CSS with modular component architecture and real-time state handling.

UNDERGRADUATE THESIS

Mitigating Domain Shift in Skin Cancer Recognition with Dropout Consistent Federated Averaging

- Reproduced three state of the art skin lesion classification models.
- Designed an EfficientNet based architecture with SE attention.
- Converted centralized training pipelines to federated learning.
- Identified and resolved dropout induced zero dilution in FedAvg.
- Implemented mask-aware aggregation to improve robustness.
